

Labrador Petro-Management Pty Ltd

About Us

Labrador Petro-Management Pty Ltd (LPM) was established in Perth, Western Australia in 1987 as Australia's first drilling project management company. Since then LPM has grown to be a major provider of consulting and project management services to the Oil & Gas industry with branch offices in Nova Scotia, Canada and New Zealand.

LPM formed an international alliance in 2003 with Frontier Engineering to offer a wider range of project management services, including onshore drilling, well testing, completions and reservoir engineering capabilities.

Continuing the effort to add value to its Australasian drilling and project management services, LPM partnered with Australian International Petro Consultants (AIPC) to assist in marketing its services in the region. AIPC provides geoscience personnel to complete LPM's drilling project management services.

LPM implemented a comprehensive management system in 2006 to enhance its business processes. The LPM Management System (LMS) ensures personnel have access to the latest policies, processes and procedures. The LMS provides clear guidance of how LPM does business in order to continuously improve processes and achieve the highest possible standards of client satisfaction.

Our Services

Drilling Project Management

- **Well Planning** – development of detailed drilling programs.
- **Materials & Logistics Support** – experienced logistics personnel with local knowledge.
- **Cost Accounting** – accountants with local and drilling project specific experience.
